

Power Maths calculation policy, UPPER KS2

KEY STAGE 2

In upper Key Stage 2, children build on secure foundations in calculation, and develop fluency, accuracy and flexibility in their approach to the four operations. They work with whole numbers and adapt their skills to work with decimals, and they continue to develop their ability to select appropriate, accurate and efficient operations.

Key language: decimal, column methods, exchange, partition, mental method, ten thousand, hundred thousand, million, factor, multiple, prime number, square number, cube number

Addition and subtraction: Children build on their column methods to add and subtract numbers with up to seven digits, and they adapt the methods to calculate efficiently and effectively with decimals, ensuring understanding of place value at every stage.

Children compare and contrast methods, and they select mental methods or jottings where appropriate and where these are more likely to be efficient or accurate when compared with formal column methods.

Bar models are used to represent the calculations required to solve problems and may indicate where efficient methods can be chosen. **Multiplication and division:** Building on their understanding, children develop methods to multiply up to 4-digit numbers by single-digit and 2-digit numbers.

Children develop column methods with an understanding of place value, and they continue to use the key skill of unitising to multiply and divide by 10, 100 and 1,000.

Written division methods are introduced and adapted for division by single-digit and 2-digit numbers and are understood alongside the area model and place value. In Year 6, children develop a secure understanding of how division is related to fractions.

Multiplication and division of decimals are also introduced and refined in Year 6.

Fractions: Children find fractions of amounts, multiply a fraction by a whole number and by another fraction, divide a fraction by a whole number, and add and subtract fractions with different denominators. Children become more confident working with improper fractions and mixed numbers and can calculate with them. Understanding of decimals with up to 3 decimal places is built through place value and as fractions, and children calculate with decimals in the context of measure as well as in pure arithmetic.

Children develop an understanding of percentages in relation to hundredths, and they understand how to work with common percentages: 50%, 25%, 10% and 1%.

Year 5 Division			
Understanding factors and prime numbers	Use equipment to explore the factors of a given number.	Understand that prime numbers are numbers with exactly two factors.	Understand how to recognise prime and composite numbers.
P	24 ÷ 3 = 8 24 ÷ 8 = 3	$13 \div 1 = 13$ $13 \div 2 = 6 r 1$ $13 \div 4 = 4 r 1$	I know that 31 is a prime number because it can be divided by only 1 and itself without leaving a remainder.
	8 and 3 are factors of 24 because they divide 24 exactly. 24 ÷ 5 = 4 remainder 4.	1 and 13 are the only factors of 13. 13 is a prime number.	I know that 33 is not a prime number as it can be divided by 1, 3, 11 and 33.
	••••• •••• ••••		I know that 1 is not a prime number, as it has only 1 factor.
	5 is not a factor of 24 because there is a remainder.		
Understanding inverse operations and	Use equipment to group and share and to explore the calculations that are present.	Represent multiplicative relationships and explore the families of division facts.	Represent the different multiplicative relationships to solve problems requiring inverse operations.
the link with multiplication,	I have 28 counters.	0000 0000 0000 0000 0000 0000 0000 000	12 ÷ 3 = 12 12 ÷ = 3
grouping and sharing	I made 7 groups of 4. There are 28 in total. I have 28 in total. I shared them equally into	0000 0000 0000 0000	x 3 = 12 x 3 = 12 x 3
	7 groups. There are 4 in each group.	60 ÷ 4 = 15 60 ÷ 15 = 4	Understand missing number problems for division calculations and know how to solve
	I have 28 in total. I made groups of 4. There are 7 equal groups.		them using inverse operations. $22 \div ? = 2$ $22 \div 2 = ?$ $? \div 2 = 22$

Dividing whole numbers by 10, 100 and 1,000

Use place value equipment to support unitising for division.

4,000 ÷ 1,000

4,000 is 4 thousands.

 $4 \times 1,000 = 4,000$

So, $4,000 \div 1,000 = 4$

Use a bar model to support dividing by unitising.

$$380 \div 10 = 38$$

380

380 is 38 tens.

 $38 \times 10 = 380$

 $10 \times 38 = 380$

So, $380 \div 10 = 38$

Understand how and why the digits change on a place value grid when dividing by 10, 100 or 1,000.

Th	Н	Т	0
3	2	0	0

 $3.200 \div 100 = ?$

3,200 is 3 thousands and 2 hundreds.

 $200 \div 100 = 2$

 $3,000 \div 100 = 30$

 $3,200 \div 100 = 32$

So, the digits will move two places to the right.

Dividing by multiples of 10, 100 and 1,000

Use place value equipment to represent known facts and unitising.

15 ones put into groups of 3 ones. There are 5 groups.

 $15 \div 3 = 5$

15 tens put into groups of 3 tens. There are 5 groups.

 $150 \div 30 = 5$

Represent related facts with place value equipment when dividing by unitising.

180 is 18 tens.

18 tens divided into groups of 3 tens. There are 6 groups.

 $180 \div 30 = 6$

Reason from known facts, based on understanding of unitising. Use knowledge of the inverse relationship to check.

 $3,000 \div 5 = 600$

 $3,000 \div 50 = 60$

 $3,000 \div 500 = 6$

 $5 \times 600 = 3,000$

 $50 \times 60 = 3,000$

 $500 \times 6 = 3,000$

		1 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0	
Dividing up to four digits by a single digit using short division	Explore grouping using place value equipment. $268 \div 2 = ?$ There is 1 group of 2 hundreds. There are 3 groups of 2 tens. There are 4 groups of 2 ones. $264 \div 2 = 134$	Use place value equipment on a place value grid alongside short division. The model uses grouping. A sharing model can also be used, although the model would need adapting. To o o o o o o o o o o o o o o o o o	Use short division for up to 4-digit numbers divided by a single digit. $ \begin{array}{cccccccccccccccccccccccccccccccccc$

Using knowledge of factors and partitions to compare methods for multiplications

Use equipment to understand square numbers and cube numbers.

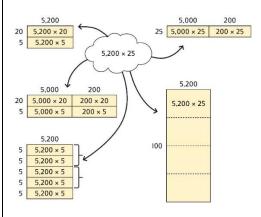

$$5 \times 5 = 5^2 = 25$$

 $5 \times 5 \times 5 = 5^3 = 25 \times 5 = 125$

Compare methods visually using an area model. Understand that multiple approaches will produce the same answer if completed accurately.

Represent and compare methods using a bar model.

Use a known fact to generate families of related facts.

Use factors to calculate efficiently.

$$=3\times5\times2\times8$$

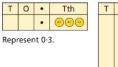

$$=3\times8\times2\times5$$

$$= 24 \times 10$$

Multiplying by 10, 100 and 1,000

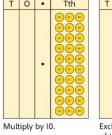

Use place value equipment to explore exchange in decimal multiplication.

 $0.3 \times 10 = ?$ 0.3 is 3 tenths.

10 x 3 tenths are 30 tenths.

30 tenths are equivalent to 3 ones.

Exchange each group of ten tenths.

each group ths.

Understand how the exchange affects decimal numbers on a place value grid.

Use knowledge of multiplying by 10, 100 and 1,000 to multiply by multiples of 10, 100 and 1,000.

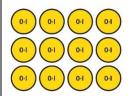

$$8 \times 100 = 800$$

 $8 \times 300 = 800 \times 3$
 $= 2.400$

$$2.5 \times 10 = 25
2.5 \times 20 = 2.5 \times 10 \times 2
= 50$$

Multiplying decimals

Explore decimal multiplications using place value equipment and in the context of measures.

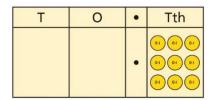

3 groups of 4 tenths is 12 tenths. 4 groups of 3 tenths is 12 tenths.

Represent calculations on a place value grid.

$$3 \times 3 = 9$$

$$3 \times 0.3 = 0.9$$

Understand the link between multiplying decimals and repeated addition.

Use known facts to multiply decimals.

$$4 \times 3 = 12$$

 $4 \times 0.3 = 1.2$
 $4 \times 0.03 = 0.12$

$$20 \times 5 = 100$$

 $20 \times 0.5 = 10$
 $20 \times 0.05 = 1$

Find families of facts from a known multiplication.

I know that $18 \times 4 = 72$.

This can help me work out:

	$4 \times 1 \text{ cm} = 4 \text{ cm}$ $4 \times 0.3 \text{ cm} = 1.2 \text{ cm}$ $4 \times 1.3 = 4 + 1.2 = 5.2 \text{ cm}$	T 0 Th 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0	$1.8 \times 4 = ?$ $18 \times 0.4 = ?$ $180 \times 0.4 = ?$ $18 \times 0.04 = ?$ Use a place value grid to understand the effects of multiplying decimals.

			$132 \div 6 = 20 + 2 = 22$
Dividing by a 2-digit number using factors	Understand that division by factors can be used when dividing by a number that is not prime.	Use factors and repeated division. $1,260 \div 14 = ?$ $1,260 \div 2 = 630$ $630 \div 7 = 90$ $1,260 \div 14 = 90$	Use factors and repeated division where appropriate. 2,100 \div 12 = ? 2,100 \rightarrow (\div^2) \rightarrow (\div^6) \rightarrow (\div^2) \rightarrow (\div^6) \rightarrow (\div^2) \rightarrow (\div^4) (\div^4) \rightarrow

Dividing by a 2-digit number using long division Use equipment to build numbers from groups.

182 divided into groups of 13. There are 14 groups.

Use an area model alongside written division to model the process.

$$377 \div 13 = ?$$

$$377 \div 13 = 29$$

Use long division where factors are not useful (for example, when dividing by a 2-digit prime number).

Write the required multiples to support the division process.

$$377 \div 13 = ?$$

$$377 \div 13 = 29$$

A slightly different layout may be used, with the division completed above rather than at the side.

			3 21 7 9 8 - 6 3 0 1 6 8 21 7 9 8 - 6 3 0 1 6 8 - 6 3 0 1 6 8 - 1 6 8 0 Divisions with a remainder explored in problem-solving contexts.
Dividing by 10, 100 and 1,000	Use place value equipment to explore division as exchange.	Represent division to show the relationship with multiplication. Understand the effect of dividing by 10, 100 and 1,000 on the digits on a place value grid. $ \begin{array}{c ccccccccccccccccccccccccccccccccccc$	Use knowledge of factors to divide by multiples of 10, 100 and 1,000. $40 o o o o o o o o o o o o o $
Dividing decimals	Use place value equipment to explore division of decimals.	Use a bar model to represent divisions.	Use short division to divide decimals with up to 2 decimal places.

8 tenths divided into 4 groups. 2 tenths in each group.

0.8					
?	?	?	?		

 $4 \times 2 = 8$

So, $4 \times 0.2 = 0.8$ $0.8 \div 4 = 0.2$

 $8 \div 4 = 2$

$$0 \cdot 5$$
 $4 \cdot {}^{4}2^{2}4$
